

Symposium “Spiders in Agriculture”

This symposium will focus on the role of spiders in agricultural food webs and pest regulation, and the impact of agricultural management on spider densities and diversity. Given the challenges for agricultural production under global change and the urgent need to replace external inputs with ecosystem services, spiders are an important component in the development of sustainable and biodiversity-friendly agriculture. We welcome high quality contributions from all crop types and regions.

Symposium Details:

Organizers:

Klaus Birkhofer, BTU Cottbus-Senftenberg, Germany

Martin Entling, RPTU Kaiserslautern-Landau, Germany

Radek Michalko, Mendel University Brno, Czech Republic

Date:

August 26 (to be confirmed)

Time:

to be announced

Presentation Format:

Each talk will be 10 minutes, followed by 5 minutes discussion.
